

Nguyen Duy Thong (Jase) Tran

duythongvt1@gmail.com | [linkedin.com/in/trannndt](https://www.linkedin.com/in/trannndt) | github.com/trannndt

+1 (431) 335 4421 | Winnipeg, MB - Willing to relocate.

TECHNICAL SKILLS

Data Science (Python, R)

- **Skills:** Expertise in Data engineering, Data visualization, ML & DL algorithms, Statistical analysis, Academic research & writing.
- **Tools:** Pandas, NumPy, SciPy, Scikit-learn, PyTorch, Keras, Transformers, W&B, Matplotlib, Seaborn, Plotly, MS Azure ML.

Full Stack Development (JS, CSS, HTML, XML)

- **Skills:** Comprehensive experience in Full-stack development, backed by the IBM Full Stack Developer Professional Certificate.
- **Tools:** React.js, Node.js, Express.js, Docker, Kubernetes, Django ORM, Bootstrap, MongoDB, REST APIs, Microservices.

Software Development (Java, C/C++, C#, Swift)

- **Skills:** Strong knowledge of Data structures, OO programming, Unit testing, Agile methodologies, Project management, CI/CD.
- **Tools:** MS Visual Studio, Android Studio, Xcode, IntelliJ, Unity Engine, GitHub, MS Azure DevOps.

Database Management & Administration (SQL, NoSQL)

- **Skills:** Proficiency in Data warehouses and Database management, ETL Processes, Advanced formulas, Pivot tables, Dashboard and Reporting tools.
- **Tools:** MS SQL Server, MS SSIS, MS Excel, MS Power BI, Oracle Banner.

WORK EXPERIENCE

Data Analyst

01/2024 – 07/2024

DataAnnotation

Remote, Winnipeg, MB

- Collaborated on training AI chatbots by designing and solving coding problems, ensuring the quality and performance of generated code.
- Evaluated AI-produced code for correctness and efficiency, providing detailed feedback to improve chatbot capabilities.
- Wrote and reviewed high-quality code snippets and explanations in various programming languages, including Python, JavaScript, and SQL.

Data Analytics Developer

01/2022 – 12/2022

Manitoba Hydro

Winnipeg, MB

Manitoba Hydro is the electric power and natural gas utility corporation of Manitoba.

- Led the development of a cloud-based machine learning solution on MS Azure to classify customer credit risk, replacing a legacy system.
- Collaborated with stakeholders to design a solution with diverse input features, ensuring adherence to privacy and ethical AI standards.
- Engineered and managed complex datasets using MS SSIS and MS SQL Server, performing advanced data integration operations.
- Developed and optimized machine learning algorithms with a 0.90+ F1-score, integrating them with MS Azure DevOps for deployment, receiving high praise for improving debt prevention and recovery efforts.

Undergraduate Research Assistant

05/ 2021 – 08/ 2021

University of Manitoba's Database and Data Mining Lab

Winnipeg, MB

Recipient of the UM 2021 Undergraduate Summer Research Award. Supervised by Dr. Carson Leung, Lab Director.

- Developed autoencoder neural network models for COVID-19 classification in a few-shot learning environment, leading to three IEEE journal publications.
- Executed end-to-end ML development, including data analysis, engineering, algorithm development, and result evaluation, collaborating effectively with the research team.
- Built and optimized high-complexity neural network models using PyTorch and managed experiments with Weights & Biases, outperforming other ML algorithms by up to 20% in sensitivity and F1 score.
- Won 1st Prize in the Bison Transport's Nexus Data Challenge 2021, creating a 60-day window LSTM model for traffic imbalance forecasting with 0.90 accuracy and a sliding window algorithm to optimize traffic scheduling.

EDUCATION

IBM Full Stack Software Developer Professional Certificate

07/2024

- Completed a 14-course program covering front-end, back-end, and cloud-native application development. Skills and technologies included Cloud foundations, Node.js, React, CI/CD, Docker, Kubernetes, OpenShift, NoSQL, Django ORM, Microservices, Serverless computing.
- Developed a variety of projects including Node.js and React apps, containerized guestbook (Docker, Kubernetes), database app (Django ORM, Bootstrap), microservices, and serverless app, AI program (Cloud Foundry, NoSQL),

Bachelor of Computer Science (Honours) | GPA: 4.05/4.50

08/ 2018 – 06/ 2023

University of Manitoba

Winnipeg, MB

- **Specialized** in Software Engineering, Machine Learning, Databases, and Statistics.
- **Achievements:** ICM Academic Merit Scholarship (2019), ICM Leadership Excellence Award (2020), Undergraduate Research Award (2020), Undergraduate Summer Research Award (2021), International Undergraduate Student Scholarship (2021).

PROJECTS

- **"RSNA Breast Cancer Detection" (CV, Python):** Vision-Transformers and ResNet50-based CV models that successfully classify the RSNA breast cancer images with a 0.70 accuracy score over a large dataset.
- **"Winnipeg Transit On-Time-Performance Analysis" (Python):** A regression analysis on the effect of traffic volume and construction closures on Winnipeg's transit timeliness, achieving an effective 0.75 R2-score.
- **"UMHUB - University Hub" (Android, Java):** Android app that serves as an information and discussion platform for university students.
